

CPS-2F added auxiliary locations | $\alpha = 0.5$

All 33 tested hurricane pairs

Curve A (solid) Curve B (hatched)

(a) Hurricanes | panel 1/3 | no additional subsampling

(b) Hurricanes | panel 2/3 | no additional subsampling

(c) Hurricanes | panel 3/3 | no additional subsampling

Each bar: $100 \times \text{added locations} / [2n(n-1)]$, using its own curve size n ; original vertices excluded.

Hurricanes: full supplied tracks, no additional subsampling.

Normalized percentages do not compare absolute counts or isolate a domain effect.

* Auxiliary and single-curve construction completed; the subsequent CPS search reached its transition limit.
